

1. Ten different data types MySQL provides are: INTEGER, SMALLINT, DECIMAL, NUMERIC, FLOAT, REAL, DOUBLE PRECISION, DATE, TIME, and DATETIME.
<https://dev.mysql.com/doc/refman/8.0/en/data-types.html>
2. My favorite things I learned this week are some Java syntax shortcuts. Namely,
`return input.isBlank() ? null : input.trim();`
as a concise if else statement and
`operations.forEach(line -> System.out.println(" " + line));`
which uses the lambda function to create a concise enhanced for loop.
